

Biotics Research Corporation is pleased to announce a *new product*:

# *Saccharomyces boulardii*

Biotics Research is pleased to announce a new product, **Saccharomyces boulardii**. Each 235 mg capsule supplies a minimum of 4 billion organisms at the time of production.

*Saccharomyces boulardii* is a viable yeast that is genetically different from Baker's yeast, and does not contain milk products. *S. boulardii* is a true "biotic" or living organism which has been shown to have beneficial effects by improving intestinal microbalance when administered in adequate amounts. *S. boulardii* is not part of the naturally occurring gut flora, and is not significantly impacted by antibiotics. In fact, *S. boulardii* has been shown to be supportive of antibiotic therapy. Oral administration achieves steady state concentrations in the colon within three days, but does not colonize in the intestinal tract. The organism is typically cleared from the intestinal tract within 2 to 5 days after discontinuation. Specifically, *S. boulardii* has proven particularly beneficial for balancing the intestinal microbiology.
